## WEVERSECLIENT

```
class Weverse.WeverseClient(**kwargs)
```

Abstract & Parent Client for connecting to Weverse and creating the internal cache.

Do not create an object directly from this class. Instead, create a [Weverse.WeverseClientSync](#) or [Weverse.WeverseClientAsync](#) object since those are concrete.

**Parameters**

- **verbose** (*bool*) – Whether to print out verbose messages.
- **web\_session** – An aiohttp or requests client session.
- **token** – The account token to connect to the Weverse API. In order to find your token, please refer to [Get Account Token](#)

**verbose**

Whether to print out verbose messages.

**Type** bool

**web\_session**

An aiohttp or requests client session.

**token**

The account token to connect to the Weverse API. In order to find your token, please refer to [Get Account Token](#)

**user\_notifications**

Most recent notifications of the account connected.

**Type** list

**headers**

API Header

**Type** dict

**api\_url**

URL to connect to the API

**Type** str

**api\_communities\_url**

Endpoint for communities

**Type** str

**api\_notifications\_url**

Endpoint for user notifications

**Type** str

**api\_new\_notifications\_url**

Endpoint for checking new user notifications

**Type** str

**api\_all\_artist\_posts\_url**

Endpoint for getting the Artist Feed from a community

**Type** str

**api\_artist\_to\_fans**

part of the endpoint (NOT FULL) for viewing the tofans posts.

**Type** str

**api\_all\_communities\_info\_url**

Endpoint for information about ALL communities and ALL idols.

**Type** str

**cache\_loaded**

Whether the Internal Weverse Cache is fully loaded. This will change for a split moment when grabbing a new post.

**Type** bool

**new\_media**

We do not store ALL old media objects as cache, so only when there are new media, we store it

**Type** list(*Media*)

**user\_endpoint**

User info endpoint.

**Type** str

**all\_posts**

All posts in cache where the dict of Post ID is the key, and the value being the Post Object

**Type** dict(*Post*)

**all\_artists**

All artists in cache where the dict of Artist ID is the key, and the value being the Artist Object

**Type** dict(*Artist*)

**all\_comments**

All comments in cache where the dict of Comment ID is the key, and the value being the Comment Object

**Type** dict(*Comment*)

**all\_notifications**

All notifications in cache where the dict of Notification ID is the key, and the value being the Notification Object

**Type** dict(*Notification*)

**all\_photos**

All photos in cache where the dict of Photo ID is the key, and the value being the Photo Object

**Type** dict(*Photo*)

**all\_communities**

All communities in cache where the dict of Community ID is the key, and the value being the Community Object

**Type** dict(*Community*)

**all\_media**

All media in cache where the dict of Media ID is the key, and the value being the Media Object

**Type** dict(*Media*)

**all\_tabs**

All tabs in cache where the dict of Tab ID is the key, and the value being the Tab Object

**Type** dict(*Tab*)

**check\_status(status, url) → bool**

Confirm the status of a URL

**Parameters**

- **status** – Status code of url connection
- **url** – Link that we connected to.

**Returns** True if the connection was a success.

**Raises** *Invalid Token* if there was an invalid token.

**static determine\_notification\_type(notification\_body) → str**

Determine the post type based on the notification body.

Since notifications do not differentiate between Posts and Comments, this is for that purpose.

**Parameters** **notification\_body** – The body of the notification.

**Returns** A string with either “comment”, “media”, or “post”

**get\_artist\_by\_id(artist\_id) → Weverse.models.artist.Artist**

Get artist by their ID.

**Parameters** **artist\_id** – The artist’s ID

**Returns** *Artist* or NoneType

**get\_comment\_by\_id(comment\_id) → Weverse.models.comment.Comment**

Get a comment by the ID :param comment\_id: Comment ID :returns: *Comment* or NoneType

**get\_community\_by\_id(community\_id) → Weverse.models.community.Community**

Get a community by the ID.

**Parameters** **community\_id** – Community ID

**Returns** *Community* or NoneType

**get\_media\_by\_id(media\_id) → Weverse.models.media.Media**

Get Media by the ID

**Parameters** **media\_id** – Media ID

**Returns** *Media* or NoneType

**get\_notification\_by\_id(notification\_id) → Weverse.models.notification.Notification**

Get a notification by the ID

**Parameters** **notification\_id** – Notification ID

**Returns** *Notification* or NoneType

**get\_photo\_by\_id**(*photo\_id*) → *Weverse.models.photo.Photo*

Get a photo by the ID

**Parameters** *photo\_id* – Photo ID

**Returns** *Photo* or *NoneType*

**get\_post\_by\_id**(*post\_id*) → *Weverse.models.post.Post*

Get a post by the ID

**Parameters** *post\_id* – Post ID

**Returns** *Post* or *NoneType*

**get\_tab\_by\_id**(*tab\_id*) → *Weverse.models.tab.Tab*

Get tab by their ID.

**Parameters** *tab\_id* – The tab ID

**Returns** *Tab* or *NoneType*

**static process\_community\_artists\_and\_tabs**(*community, response\_text\_as\_dict*)

Process the community artists and tabs and add them to their respective communities.

**Parameters**

- **community** – Community object
- **response\_text\_as\_dict** – Response text of connection to endpoint but as a dict.

## 2.1 WeverseClientSync

**class** Weverse.**WeverseClientSync**(\*\*kwargs)

Synchronous Weverse Client that Inherits from *WeverseClient*.

**Parameters** **kwargs** – Same as *WeverseClient*.

Attributes are the same as *WeverseClient*.

**check\_new\_user\_notifications()**

Checks if there is a new user notification, updates the cache, and returns if there was.

**Returns** (bool) Whether there is a new notification.

**check\_token\_works()**

Check if a token is invalid.

**Returns** (bool) True if the token works.

**create\_communities()**

Get and Create the communities the logged in user has access to.

**create\_community\_artists\_and\_tabs()**

Create the community artists and tabs and add them to their respective communities.

**create\_post**(community: *Weverse.models.community.Community*, post\_id) → *Weverse.models.post.Post*

Create a post and update the cache with it. This is meant for an individual post.

**Parameters**

- **community** – *Community* the post was created under.
- **post\_id** – The id of the post we are needing to fetch.

**create\_posts**(community: *Weverse.models.community.Community*, next\_page\_id: *Optional[int] = None*)

Paginate through a community's posts and add it to object cache.

**Parameters**

- **community** – *Community* the posts exist under.
- **next\_page\_id** ([*OPTIONAL*]) – Next Page ID (Weverse paginates posts).

**fetch\_artist\_comments**(community\_id, post\_id)

Fetches the artist comments on a post.

**Parameters**

- **community\_id** – Community ID the post is on.

- **post\_id** – Post ID to fetch the artist comments of.

**Returns** List[*Comment*]

**fetch\_comment\_body**(*community\_id*, *comment\_id*)

Fetches a comment from its ID.

**Parameters**

- **community\_id** – The ID of the community the comment belongs to.
- **comment\_id** – The ID of the comment to fetch.

**Returns** (str) Body of the comment.

**fetch\_media**(*community\_id*, *media\_id*)

Receive media object based on media id.

**Parameters**

- **community\_id** – The ID of the community the media belongs to.
- **media\_id** – The ID of the media to fetch.

**Returns** *Media* or NoneType

**get\_user\_notifications**()

Get a list of updated user notification objects.

**Returns** List[*Notification*]

**start**(*create\_old\_posts=True*, *create\_notifications=True*)

Creates internal cache.

This is the main process that should be run.

**Parameters**

- **create\_old\_posts** – (bool) Whether to create cache for old posts.
- **create\_notifications** – (bool) Whether to create/update cache for old notifications.

**Raises** *Weverse.error.PageNotFound*

**Raises** *Weverse.error.InvalidToken*

**Raises** *Weverse.error.BeingRateLimited*

**translate**(*post\_or\_comment\_id*, *is\_post=False*, *is\_comment=False*, *p\_obj=None*, *community\_id=None*)

Translates a post or comment, must set post or comment to True.

**Parameters**

- **post\_or\_comment\_id** – A post or comment ID.
- **is\_post** ([*OPTIONAL*]) – If we passed in a post.
- **is\_comment** ([*OPTIONAL*]) – If we passed in a comment
- **p\_obj** ([*OPTIONAL*]) – The object we are looking to translate
- **community\_id** ([*OPTIONAL*]) – The community id the post/comment was made under.

**Returns** (str) Translated message or NoneType

**update\_cache\_from\_notification**()

Grab a new post based from a notification and add it to cache.

## 2.2 WeverseClientAsync

**class** Weverse.**WeverseClientAsync**(*loop=<\_UnixSelectorEventLoop running=False closed=False debug=False>, \*\*kwargs*)

Asynchronous Weverse Client that Inherits from *WeverseClient*.

### Parameters

- **loop** – Asyncio Event Loop
- **kwargs** – Same as Weverse.

### loop

Asyncio Event Loop

**Attributes are the same as :ref:`WeverseClient`.**

**async check\_new\_user\_notifications()** → bool

Checks if there is a new user notification, updates the cache, and returns if there was.

This is a coroutine and must be awaited.

**Returns** (bool) Whether there is a new notification.

**async check\_token\_works()** → bool

Check if a token is invalid.

This is a coroutine and must be awaited.

**Returns** (bool) True if the token works.

**async create\_communities()**

Get and Create the communities the logged in user has access to.

This is a coroutine and must be awaited.

**async create\_community\_artists\_and\_tabs()**

Create the community artists and tabs and add them to their respective communities.

This is a coroutine and must be awaited.

**async create\_post**(*community: Weverse.models.community.Community, post\_id*) → *Weverse.models.post.Post*

Create a post and update the cache with it. This is meant for an individual post.

This is a coroutine and must be awaited.

### Parameters

- **community** – *Community* the post was created under.
- **post\_id** – The id of the post we are needing to fetch.

**async create\_posts**(*community: Weverse.models.community.Community, next\_page\_id: Optional[int] = None*)

Paginate through a community's posts and add it to object cache.

This is a coroutine and must be awaited.

### Parameters

- **community** – *Community* the posts exist under.
- **next\_page\_id** ([OPTIONAL]) – Next Page ID (Weverse paginates posts).

**async fetch\_artist\_comments**(*community\_id, post\_id*)

Fetches the artist comments on a post.

This is a coroutine and must be awaited.

**Parameters**

- **community\_id** – Community ID the post is on.
- **post\_id** – Post ID to fetch the artist comments of.

**Returns** List[*Comment*]

**async fetch\_comment\_body**(*community\_id, comment\_id*)

Fetches a comment from its ID.

This is a coroutine and must be awaited.

**Parameters**

- **community\_id** – The ID of the community the comment belongs to.
- **comment\_id** – The ID of the comment to fetch.

**Returns** (str) Body of the comment.

**async fetch\_media**(*community\_id, media\_id*)

Receive media object based on media id.

This is a coroutine and must be awaited.

**Parameters**

- **community\_id** – The ID of the community the media belongs to.
- **media\_id** – The ID of the media to fetch.

**Returns** *Media* or NoneType

**async get\_user\_notifications**()

Get a list of updated user notification objects.

This is a coroutine and must be awaited.

**Returns** List[*Notification*]

**async start**(*create\_old\_posts=True, create\_notifications=True*)

Creates internal cache.

This is the main process that should be run.

This is a coroutine and must be awaited.

**Parameters**

- **create\_old\_posts** – (bool) Whether to create cache for old posts.
- **create\_notifications** – (bool) Whether to create/update cache for old notifications.

**Raises** *Weverse.error.PageNotFound*

**Raises** *Weverse.error.InvalidToken*

**Raises** *Weverse.error.BeingRateLimited*

**async translate**(*post\_or\_comment\_id, is\_post=False, is\_comment=False, p\_obj=None, community\_id=None*)

Translates a post or comment, must set post or comment to True.

This is a coroutine and must be awaited.

**Parameters**

- **post\_or\_comment\_id** – A post or comment ID.
- **is\_post** (*[OPTIONAL]*) – If we passed in a post.
- **is\_comment** (*[OPTIONAL]*) – If we passed in a comment
- **p\_obj** (*[OPTIONAL]*) – The object we are looking to translate
- **community\_id** (*[OPTIONAL]*) – The community id the post/comment was made under.

**Returns** (str) Translated message or NoneType

**async update\_cache\_from\_notification()**

Grab a new post based from a notification and add it to cache.

This is a coroutine and must be awaited.

## 3.1 Community

**class** Weverse.models.Community(\*\*kwargs)

A Comment object that represents a Weverse Comment that belongs to an Artist.

It is not suggested to create a Comment manually, but rather through the following method: [Weverse.objects.create\\_comment\\_objects](#)

The information retrieved on a Comment is directly from the Weverse API and altered to fit this class.

### Parameters

- **id** (int) – The Community ID.
- **name** (str) – The Community Name.
- **description** (str) – Description of the Community.
- **member\_count** (int) – Amount of members in the community.
- **home\_banner** (str) – Direct Image URL to the home banner.
- **icon** (str) – Direct Image URL to the Icon.
- **Banner** (str) – Direct Image URL to the Banner.
- **full\_name** (str) – Full Name of the Community.
- **fc\_member** (bool) – If a special membership is required to join.
- **show\_member\_count** (bool) – If the member count is visible.

### id

The Community ID.

**Type** int

### name

The Community Name.

**Type** str

### description

Description of the Community.

**Type** str

### member\_count

Amount of members in the community.

**Type** int

**home\_banner**  
Direct Image URL to the home banner.

**Type** str

**icon**  
Direct Image URL to the Icon.

**Type** str

**Banner**  
Direct Image URL to the Banner.

**Type** str

**full\_name**  
Full Name of the Community.

**Type** str

**fc\_member**  
If a special membership is required to join.

**Type** bool

**show\_member\_count**  
If the member count is visible.

**Type** bool

**artists**  
List of artists the community has.

**Type** List[[Artist](#)]

**tabs**  
The Tabs the community has.

**Type** List[[Tab](#)]

## 3.2 Notification

**class** Weverse.models.**Notification**(*\*\*kwargs*)  
A Media object that represents a Weverse Media Post.

It is not suggested to create a Notification object manually, but rather through the following method: [Weverse.objects.create\\_notification\\_objects](#)

The information retrieved on a Notification is directly from the Weverse API and altered to fit this class.

### Parameters

- **id** (*int*) – The id of the notification.
- **message** (*str*) – The message of the notification.
- **bold\_element** (*str*) – The bolded element in the notification.
- **community\_id** (*int*) – The community id associated with the notification.
- **community\_name** (*str*) – The community name associated with the notification.
- **contents\_type** (*str*) – The type of post it is.

- **contents\_id** (*int*) – The id of the content post.
- **notified\_at** – The time the notification was triggered.
- **icon\_image\_url** (*str*) – Icon image url of the notification.
- **thumbnail\_image\_url** (*str*) – Thumbnail url of the notification.
- **artist\_id** (*int*) – The ID of the Artist that released the content.
- **is\_membership\_content** (*bool*) – If the content is exclusive to members.
- **is\_web\_only** (*bool*) – Whether the notification is only available directly on the website.
- **platform** (*str*) – The platform of the notification.

**id**

The id of the notification.

**Type** int

**message**

The message of the notification.

**Type** str

**bold\_element**

The bolded element in the notification.

**Type** str

**community\_id**

The community id associated with the notification.

**Type** int

**community\_name**

The community name associated with the notification.

**Type** str

**contents\_type**

The type of post it is.

**Type** str

**contents\_id**

The id of the content post.

**Type** int

**notified\_at**

The time the notification was triggered.

**icon\_image\_url**

Icon image url of the notification.

**Type** str

**thumbnail\_image\_url**

Thumbnail url of the notification.

**Type** str

**artist\_id**

The ID of the Artist that released the content.

**Type** int

**is\_membership\_content**

If the content is exclusive to members.

**Type** bool

**is\_web\_only**

Whether the notification is only available directly on the website.

**Type** bool

**platform**

The platform of the notification.

**Type** str

## 3.3 Photo

**class** Weverse.models.Photo(\*\*kwargs)

A Photo object that represents a Weverse Photo that belongs to media or a post.

It is not suggested to create a Photo manually, but rather through the following method: [Weverse.objects.create\\_photo\\_objects](#)

The information retrieved on a Photo is directly from the Weverse API and altered to fit this class.

**Parameters**

- **id** (*int*) – The ID of the photo.
- **content\_index** (*int*) – Index the photo is in from a bundle of photos.
- **thumbnail\_img\_url** (*str*) – The thumbnail image link.
- **thumbnail\_img\_width** (*str*) – The original image width.
- **thumbnail\_img\_height** (*str*) – The thumbnail image height.
- **original\_img\_url** (*str*) – The original image link.
- **original\_img\_width** (*str*) – The original image width.
- **original\_img\_height** (*str*) – The original image height.
- **file\_name** (*str*) – File name of the photo.

**id**

The ID of the photo.

**Type** int

**content\_index**

Index the photo is in from a bundle of photos.

**Type** int

**thumbnail\_img\_url**

The thumbnail image link.

**Type** str

**thumbnail\_img\_width**

The original image width.

**Type** str

**thumbnail\_img\_height**  
The thumbnail image height.  
Type `str`

**original\_img\_url**  
The original image link.  
Type `str`

**original\_img\_width**  
The original image width.  
Type `str`

**original\_img\_height**  
The original image height.  
Type `str`

**file\_name**  
File name of the photo.  
Type `str`

**post**  
The Post Object the photo belongs to.  
Type `Post`

## 3.4 Artist

**class** `Weverse.models.Artist(**kwargs)`

An Artist object that represents a Weverse Artist that belongs in a community.

It is not suggested to create an Artist manually, but rather through the following method: [`Weverse.objects.create\_artist\_objects`](#)

The information retrieved on an Artist is directly from the Weverse API and altered to fit this class.

### Parameters

- **id** (`int`) – The Artist ID.
- **community\_user\_id** (`int`) – Artist’s ID in the community.
- **name** (`str`) – The Primary Artist Name.
- **list\_name** (`list`) – A list of names for the Artist.
- **is\_online** (`bool`) – Whether the Artist is currently online
- **profile\_nick\_name** (`str`) – Artist nickname.
- **profile\_img\_path** (`str`) – Image URL for the Artist’s profile.
- **is\_birthday** (`bool`) – Whether it is the Artist’s birthday.
- **group\_name** (`str`) – The group name the Artist is associated with.
- **max\_comment\_count** (`int`) – The maximum amount of comments this Artist can post.
- **community\_id** (`int`) – The ID of the community this Artist object was selected from.
- **is\_enabled** (`bool`) – If the Artist account is enabled.

- **has\_new\_to\_fans** (bool) – If the Artist has a new post for fans.
- **has\_new\_private\_to\_fans** (bool) – If the Artist has a new private post for fans.
- **to\_fan\_last\_id** (int) – The latest tofan post ID.
- **to\_fan\_last\_created\_at** – When the artist’s last tofan post was created.
- **to\_fan\_last\_expire\_in** – When the artist’s last tofan post expires.
- **birthday\_img\_url** (str) – A direct image url to the artist’s birthday image.
- **community** ([Community](#)) – The community the Artist is in.
- **posts** (list) – A list of posts the Artist has.

**id**

The Artist ID.

**Type** int

**community\_user\_id**

Artist’s ID in the community.

**Type** int

**name**

The Primary Artist Name.

**Type** str

**list\_name**

A list of names for the Artist.

**Type** list

**is\_online**

Whether the Artist is currently online

**Type** bool

**profile\_nick\_name**

Artist nickname.

**Type** str

**profile\_img\_path**

Image URL for the Artist’s profile.

**Type** str

**is\_birthday**

Whether it is the Artist’s birthday.

**Type** bool

**group\_name**

The group name the Artist is associated with.

**Type** str

**max\_comment\_count**

The maximum amount of comments this Artist can post.

**Type** int

**community\_id**

The ID of the community this Artist object was selected from.

**Type** int

**is\_enabled**  
If the Artist account is enabled.

**Type** bool

**has\_new\_to\_fans**  
If the Artist has a new post for fans.

**Type** bool

**has\_new\_private\_to\_fans**  
If the Artist has a new private post for fans.

**Type** bool

**to\_fan\_last\_id**  
The latest tofan post ID.

**Type** int

**to\_fan\_last\_created\_at**  
When the artist's last tofan post was created.

**to\_fan\_last\_expire\_in**  
When the artist's last tofan post expires.

**birthday\_img\_url**  
A direct image url to the artist's birthday image.

**Type** str

**community**  
The community the Artist is in.

**Type** *Community*

**posts**  
A list of posts the Artist has.

**Type** list

## 3.5 Comment

**class** Weverse.models.**Comment**(\*\*kwargs)

A Comment object that represents a Weverse Comment that belongs to an Artist.

It is not suggested to create a Comment manually, but rather through the following method: *Weverse.objects.create\_comment\_objects*

The information retrieved on a Comment is directly from the Weverse API and altered to fit this class.

### Parameters

- **id** (int) – The ID of the comment.
- **body** (str) – The comment content AKA the body of the message.
- **comment\_count** (int) – Amount of comments inside of this comment (replies).
- **like\_count** (int) – Amount of likes on the comment.
- **has\_my\_like** (bool) – Whether the client has liked the comment.

- **is\_blind** (bool) – NOT SURE WHAT THIS IS
- **post\_id** (int) – The Post ID that the comment was created under.
- **created\_at** – The time the comment was created.
- **updated\_at** – The time the comment was updated.

**id**

The ID of the comment.

**Type** int

**body**

The comment content AKA the body of the message.

**Type** str

**comment\_count**

Amount of comments inside of this comment (replies).

**Type** int

**like\_count**

Amount of likes on the comment.

**Type** int

**has\_my\_like**

Whether the client has liked the comment.

**Type** bool

**is\_blind**

NOT SURE WHAT THIS IS

**Type** bool

**post\_id**

The Post ID that the comment was created under.

**Type** int

**created\_at**

The time the comment was created.

**updated\_at**

The time the comment was updated.

**post**

The Post Object the comment belongs to.

**Type** *Post*

## 3.6 Post

**class** Weverse.models.Post(\*\*kwargs)

A Post object that represents a Weverse Post.

It is not suggested to create a Post manually, but rather through the following method: [Weverse.objects.create\\_post\\_objects](#)

The information retrieved on a Post is directly from the Weverse API and altered to fit this class.

### Parameters

- **id** (*int*) – The ID of the post.
- **community\_tab\_id** (*int*) – The tab the post is under.
- **type** (*str*) – The type of Post.
- **body** (*str*) – Body Message on the Post.
- **comment\_count** (*int*) – Current amount of comments on the Post
- **like\_count** (*int*) – Current amount of likes on the Post
- **max\_comment\_count** (*int*) – Maximum amount of comments that can be on the Post
- **has\_my\_like** (*bool*) – If the client user has the post liked.
- **has\_my\_bookmark** (*bool*) – If the client user has the post bookmarked.
- **created\_at** – When the post was created
- **updated\_at** – When the post was last modified.
- **is\_locked** (*bool*) – Whether the post is locked.
- **is\_blind** (*bool*) – Whether the post is visible?? Unknown
- **is\_active** (*bool*) – Whether the post is active.
- **is\_private** (*bool*) – Whether the post is private.
- **photos** (List[[Photo](#)]) – A list of photos under the post.
- **is\_hot\_trending\_post** (*bool*) – If the post is trending.
- **is\_limit\_comment** (*bool*) – If the comments are limited.
- **artist\_comments** (List[[Comment](#)]) – The Artist comments under the post.
- **community\_artist\_id** (*int*) – The Community Artist ID that made the post.
- **artist\_id** (*int*) – The ID of the Artist that made the post.

**id**

The ID of the post.

**Type** int

**community\_tab\_id**

The tab the post is under.

**Type** int

**type**

The type of Post.

**Type** str

**body**  
Body Message on the Post.  
**Type** str

**comment\_count**  
Current amount of comments on the Post  
**Type** int

**like\_count**  
Current amount of likes on the Post  
**Type** int

**max\_comment\_count**  
Maximum amount of comments that can be on the Post  
**Type** int

**has\_my\_like**  
If the client user has the post liked.  
**Type** bool

**has\_my\_bookmark**  
If the client user has the post bookmarked.  
**Type** bool

**created\_at**  
When the post was created

**updated\_at**  
When the post was last modified.

**is\_locked**  
Whether the post is locked.  
**Type** bool

**is\_blind**  
Whether the post is visible?? Unknown  
**Type** bool

**is\_active**  
Whether the post is active.  
**Type** bool

**is\_private**  
Whether the post is private.  
**Type** bool

**photos**  
A list of photos under the post.  
**Type** List[*Photo*]

**is\_hot\_trending\_post**  
If the post is trending.  
**Type** bool

**is\_limit\_comment**

If the comments are limited.

**Type** bool

**artist\_comments**

The Artist comments under the post.

**Type** List[[Comment](#)]

**community\_artist\_id**

The Community Artist ID that made the post.

**Type** int

**artist\_id**

The ID of the Artist that made the post.

**Type** int

**artist**

The Artist Object the post belongs to.

**Type** [Artist](#)

## 3.7 Tab

**class** Weverse.models.Tab(*tab\_id=None, name=None*)

A Post object that represents a Weverse Post.

It is not suggested to create a Post manually, but rather through the following method: [Weverse.objects.create\\_post\\_objects](#)

The information retrieved on a Post is directly from the Weverse API and altered to fit this class.

**Parameters**

- **tab\_id** (*[Optional] int*) – The ID of the Tab.
- **name** (*[Optional] str*) – The Tab name.

**id**

The ID of the Tab.

**Type** int

**name**

The Tab name.

**Type** str

## 3.8 Media

**class** Weverse.models.**Media**(\*\*kwargs)

A Media object that represents a Weverse Media Post.

It is not suggested to create a Media object manually, but rather through the following method: [Weverse.objects.create\\_media\\_object](#)

The information retrieved on Media is directly from the Weverse API and altered to fit this class.

### Parameters

- **id** (*int*) – ID of the Media post.
- **community\_id** (*int*) – ID of the Community the media post was made in.
- **body** (*str*) – The media content AKA the body of the message.
- **type** (*str*) – The type of media post it is.
- **thumbnail\_path** (*str*) – The (url??) of the thumbnail.
- **title** (*str*) – The title of the media post.
- **level** – The level of access the media post is categorized under.
- **video\_link** (*str*) – The video link supplied under the media post.
- **youtube\_id** (*str*) – The youtube video ID.

### **id**

ID of the Media post.

**Type** int

### **community\_id**

ID of the Community the media post was made in.

**Type** int

### **body**

The media content AKA the body of the message.

**Type** str

### **type**

The type of media post it is.

**Type** str

### **thumbnail\_path**

The (url??) of the thumbnail.

**Type** str

### **title**

The title of the media post.

**Type** str

### **level**

The level of access the media post is categorized under.

### **video\_link**

The video link supplied under the media post.

**Type** str

**youtube\_id**

The youtube video ID.

**Type** str

## MODEL CREATION

`Weverse.objects.create_artist_objects(current_artists: list) → list`

Creates artist objects based on a list of information sent in and returns the objects.

**Parameters** `current_artists` – Artist information received from endpoint.

**Returns** `List[Artist]`

`Weverse.objects.create_comment_objects(current_comments: list) → list`

Creates & Returns comment objects based on a list of comments

**Parameters** `current_comments` – comment information from endpoint.

**Returns** `List[Comment]`

`Weverse.objects.create_community_objects(current_communities: list) → dict`

Creates community objects based on a list of information sent in and returns the objects.

**Parameters** `current_communities` – Community information received from endpoint.

**Returns** `dict{community id: Community}`

`Weverse.objects.create_media_object(media_info: dict) → Weverse.models.media.Media`

Creates and returns a media object

**Parameters** `media_info` – media information from endpoint.

**Returns** `Media`

`Weverse.objects.create_notification_objects(current_notifications: list) → list`

Creates notification objects based on a list of information sent in and returns the objects.

**Parameters** `current_notifications` – Notification information received from endpoint.

**Returns** `List[Notification]`

`Weverse.objects.create_photo_objects(current_photos: list) → list`

Creates & Returns photo objects based on a list of photos

**Parameters** `current_photos` – photo information from endpoint.

**Returns** `List[Photo]`

`Weverse.objects.create_post_objects(current_posts: list, community:`

`Weverse.models.community.Community, new=False) → list`

Creates post objects based on a list of posts sent in and the community and returns the objects.

**Parameters**

- `current_posts` – Post information received from endpoint.
- `community` – `Community` that the post belongs in.

- **new** – bool Whether or not the post is new.

**Returns** List[*Post*]

`Weverse.objects.create_tab_objects(current_tabs: list) → list`

Creates tab objects based on a list of information sent in and returns the objects.

**Parameters** **current\_tabs** – Tab information received from endpoint.

**Returns** List[*Tab*]

## EXCEPTIONS

### 5.1 Invalid Token

**exception** `Weverse.InvalidToken`

An Exception Raised When an Invalid Token was Supplied.

### 5.2 Page Not Found

**exception** `Weverse.PageNotFound(url)`

An Exception Raised When a link was not found.

**Parameters** `url` (str) – The link that was not found.

### 5.3 Being Rate Limited

**exception** `Weverse.BeingRateLimited`

An Exception Raised When Weverse Is Being Rate-Limited.

## GET ACCOUNT TOKEN

Your account token is needed (Will need to be updated about every 6 months iirc).

In order to get your account token, go to <https://www.weverse.io/> and Inspect Element (F12).

Then go to the *Network* tab and filter by *XHR*.

Then refresh your page (F5) and look for *info* or *me* under *XHR*.

Under Headers, scroll to the bottom and view the request headers.

You want to copy everything past *authorization: Bearer*.

For example, you may see (This is just an example):

`authorization: Bearer ABCDEFGHIJKLMNOPQRSTUVWXYZ`

Then `ABCDEFGHIJKLMNOPQRSTUVWXYZ` would be your auth token for Weverse.

It is suggested to have the auth token as an environment variable.

## ASYNCHRONOUS USAGE

```
# Asynchronous
import asyncio
import aiohttp
from Weverse.error import InvalidToken
from Weverse.weverseasync import WeverseClientAsync

token = "fake_token" # REQUIRED
# It is advised to pass in your own web session as it is not closed in Weverse
web_session = aiohttp.ClientSession()
weverse_client = WeverseClientAsync(authorization=token, verbose=True, loop=asyncio.get_
↳ event_loop(), web_session=web_session)
try:
    await weverse_client.start() # creates all the cache needed for your account.
except InvalidToken:
    print("Invalid Token")
```

## SYNCHRONOUS USAGE

```
# Synchronous
import requests
from Weverse.weversesync import WeverseClientSync
from Weverse.error import InvalidToken

token = "fake_token" # REQUIRED
# It is advised to pass in your own web session as it is not closed in Weverse
web_session = requests.Session() # A session is created by default
weverse_client = WeverseClientSync(authorization=token, verbose=True)
try:
    weverse_client.start() # creates all the cache needed for your account.
except InvalidToken:
    print("Invalid Token")
```

## INDICES AND TABLES
